

## 2. ASP.NET Core project

1. In Visual Studio 2022, create ASP.NET Core Web project/empty

- ASP.NET Core Empty
- Project name: Ecommerce.WebApp
- Configure for HTTPS selected, and Enable Docker cleared and build it.
- Open project file, we see this:

=====

```
<Project Sdk="Microsoft.NET.Sdk.Web">
```

```
  <PropertyGroup>
```

```
    <TargetFramework>net6.0</TargetFramework>
```

```
    <Nullable>enable</Nullable>
```

```
    <ImplicitUsings>enable</ImplicitUsings>
```

```
  </PropertyGroup>
```

```
</Project>
```

=====

- In Solution Explorer choose "Show all files", Expand the obj folder, expand the Debug folder, expand the net6.0 folder, select the Ecommerce.WebApp.GlobalUsings.g.cs file to see all the implicitly imported namespaces include all the ones for a console app or class library
- Collapse the obj folder
